Light as part of superyacht interior

Superyacht interiors are built on craftsmanship, precision and a clear design vision. Every detail counts, and every millimeter of space matters.

For us, lighting on board a superyacht is more than illumination. It becomes part of the architecture, the materials and the overall atmosphere.

With our printed-light technology, we create tailored lighting solutions that combine maximum design freedom with minimal installation space.

We enable designers, shipyards and industry partners, to integrate light seamlessly into exceptional superyacht interiors. The result is lighting you don‘t just see, but feel.

SparkSpace: Transforming surfaces through light

With SparkSpace, translucent crystalline stone can be transformed into a fascinating luminous surface. The ultra slim system provides homogeneous backlighting all the way to the edges and can be continuously dimmed to create different atmospheres throughout the day and evening.

The printed-light technology enables elegant surface lighting solutions for natural stone and other translucent materials, even in complex, organic forms. Individually positioned light points create perfectly homogeneous backlighting across the entire surface, with continuous dimming from full brightness down to the lowest light levels. 360° illumination from all sides provides exceptional creative freedom for bespoke designs with a refined and harmonious appearance.

Its minimal installation depth makes it particularly suitable for integration into sophisticated yacht interiors where every millimeter of space matters.

SparkShelf: A flexible stage for exceptional objects

On a superyacht, interiors evolve with the objects, artworks and personal pieces displayed within them. SparkShelf offers a modular approach to illuminated shelving, combining individual shapes and surfaces with integrated light. The freeform design possibilities allow each solution to become part of the overall interior concept. Whether presenting selected objects, artworks or decorative elements, SparkShelf creates a flexible illuminated stage that can adapt to changing arrangements and gives designers new possibilities for creating a distinctive appearance on board.

SparkShape: Bespoke luminaires with countless design freedom

The ultraslim luminaires are individually tailored to the naval architecture and interior concept and can be created as unique masterpieces in virtually any freeform shape. Whether curved, angular, or organically flowing, each luminaire is designed to follow the vision of the designer rather than the constraints of standard lighting.

This freedom allows SparkShape to become an integral part of the interior design itself, rather than simply an addition to it.

Dimmable direct and indirect light can be combined within one luminaire, complemented by the characteristic luminous edge that has become a signature of the our design language. This interplay of light directions creates depth and dimension within a room, allowing surfaces, materials, and spatial details to be highlighted exactly as intended.

Separate dimming allows the lighting atmosphere to be adjusted effortlessly for different situations on board, from bright functional illumination during the day to relaxed, intimate evening settings that shift the entire mood of a room in an instant.

Every SparkShape luminaire is the result of close collaboration between our team and the designer, ensuring that the final piece is not only technically refined but also a true realization of the owners vision. The ultraslim profile means that even the most ambitious shapes remain lightweight, integrating seamlessly into ceilings, walls, or bespoke furniture elements without compromising on structural or design integrity.

This combination of individual shapes, ultraslim design, and versatile lighting scenarios opens up entirely new possibilities for bespoke superyacht lighting, giving owners and yacht designers a tool to create truly unique atmospheres that conventional lighting manufacturer couldn´t achieve.

Let us be the creative enabler for your vision.
